# Markdown Slides Template

This is a template to create slides using Markdown!

You can use this template to quickly create your own slides from plain text.

How to use this template

Follow these three simple steps to create your own markdown slides:

1. Create your own repository from this template

2. Enable the automatic slide generation

3. Upload your own content

1. Create your own repository from this template:

- Click on `Use this template` -> `Create new repository`
- Give the repository a meaningful name and create it

2. Enable the automatic slide generation:

- Go to `Settings` :
  - Enable the PDF upload:
    - go to `Actions` -> `General`
    - scroll down to `Workflow permissions` and select `Read and write permissions`
    - click on `Save`
  - Enable the HTML pages:
    - inside the `Settings` , go to `Pages`
    - in the `Build and deployment` section, set the `Source` to `GitHub Actions`

3. Upload your own content

- In your repository, navigate to the `slides` directory
- You can replace the content of `index.md` with your own content
- You can also create or upload new markdown (`.md`) files here

Done!

You should now find generated pdf files inside the `pdf` directory of your repository as well as HTML slides following the link from the `Deployment` section on the bottom of the right sidebar in your repository.
